

Letter of Recommendation

To Whom It May Concern,

I am pleased to recommend Mr. Ke Tan, whom I came to know during his Master's studies in Data and Computer Science at Heidelberg University. He is currently carrying out his internship under my supervision, where I have had the opportunity to closely observe his academic abilities, work ethic, and reliability. During his internship, Mr. Tan has been working on topics related to computer vision and machine learning. In this context, he has demonstrated good skills in understanding scientific concepts, reading and analyzing research papers, and translating ideas into practical implementations. He has a good background in machine learning and coding, and he approaches technical problems with clarity and persistence. What has particularly stood out to me is his ability to work consistently and efficiently. He is quick to implement ideas, delivers code reliably, and shows good problem-solving skills when facing technical challenges. In addition, he has always been dependable in our regular meetings, well prepared, and actively engaged in discussions.

Mr. Ke Tan is a motivated and capable student with strong potential for future academic or professional work in machine learning and related areas. I am confident that he will be a valuable addition to any team or program, and I am happy to recommend him.

Please do not hesitate to contact me if further information is needed.
